Abstract (en)

[origin: WO2010006745A1] What is described is a linear connector for connecting two opposing ends of a hollow profile member (8) for the purposes of forming a frame-like spacer for the production of insulating glass panes, comprising a top side (2), a bottom side (3) and two side surfaces (4) connecting the top side (2) and the bottom side (3) of the linear connector (1). According to the invention, a midsection is provided in a middle area of the linear connector (1), said midsection extending at least along the entire width of the top side (2) or the bottom side (3) of the linear connector (1).
