Abstract (en)

[origin: WO2009152823A1] The invention relates to a cooling liquefier, having a freely positionable frame, which carries a heat exchanger and at least one fan that produces an air current flowing along the heat exchanger, and having a filter device, which is connected upstream of the heat exchanger in the flow direction of the air current and comprises a replaceable filter element. The invention further proposes a suitable filter device and a suitable filter element.
