Abstract (en)

[origin: WO2010012296A1] The present invention relates to a particularly effective device for determining a temperature that can be used over a wide temperature range, having an electrical oscillation circuit (S) comprising at least one temperature-dependent member (TS1, TS2), a generator for exciting the oscillation circuit (S), a detection device (D) for capturing the oscillation of the oscillation circuit and for determining the temperature using at least one temperature-dependent parameter of the oscillation circuit (S), and an inductive coupling device (K) for inductively coupling the oscillation circuit to the generator (G) and the detection device (D). The invention further relates to an arrangement and a method for determining a temperature.
