Abstract (en)

[origin: WO2010000809A1] The present invention relates to a method and system for monitoring a person wearing a badge and likely to be in a potentially high-risk area. The method is characterized in that it comprises: - a step (1) of activating a radio frequency communication apparatus, referred to as a beacon; - a step (2) of broadcasting a signal (S1) carrying a piece of information about a risk occurring in said potentially high-risk area and defines the type of risk and the level of seriousness thereof; - a step (3) of receiving a signal (S1) carrying the piece of risk information by a badge worn by the person; - a step (4) of transmitting, by the badge, an identifier of the person to the beacon; - a step (7) for determining, by the badge, a piece of information disclosing the person at risk; and - a step (8) of transmitting the piece of disclosing information to a remote apparatus (GC) responsible for centralized risk management.
