Abstract (en)

[origin: WO2010000532A2] The invention relates to an arrangement for generating a simulated operating noise of a vehicle drive unit, comprising the drive unit that has a continuously variable transmission, a noise generator, and a noise output device. The noise generator (16) generates or influences the operating noise (22) independently of the actual speed (rr) and/or the actual load of the drive unit (3). The invention further relates to a vehicle (1) comprising such an arrangement (14) and a corresponding method.
