Abstract (en)
[origin: EP2308452A1] The needle (1) has a distal portion provided with a transversal section (4) whose polygonal shape forms projecting corners (5) such that the needle having an outer longitudinal edge (6) is extended along the distal portion. Two fluid passage channels are offset with respect to one another along a transversal direction. The outer longitudinal edge forms draft angles from a proximal connection end towards a free distal perforating end.
