Abstract (en)

[origin: EP2308774A1] It is an object of the invention to provide a technique which can prevent the occurrence of a wrinkle or bend in a lid which opens and closes an opening of a package. A body 110 of a package 100 has an opening 112 through which wet tissues 130 are taken out. A lid 120 of the package 100 has an opening-closing portion 120B formed by a laminated portion of a first sheet 121 and a second sheet 122, and a proximal portion 120A formed by a portion of the second sheet 122 which protrudes from the first sheet 121. A corner 122a of the proximal portion 120A of the lid 120 on the side opposite to the opening-closing portion 120B is rounded. The corner 122a may be chamfered.
