Abstract (en)

[origin: EP2308789A1] The method involves unlocking an intermediate telescopic panel (14), a proximal panel (9) and a distal panel (8) for pivoting the panels toward a vertical position and opening a lid strut (1). The strut is opened to cause rotation of a multipurpose piece (2) of the strut and a locking projection (6) and release an element of the distal panel for allowing deployment of the distal panel and the telescopic panel. The distal panel is driven downward or toward the telescopic panel. An independent claim is also included for a toe-rail comprising a casing for storage of telescopic panels.
