Abstract (en)

The present invention relates to a wall cladding assembly comprising a plurality of cladding elements (12) and anchor means for retaining the cladding elements in a wall (14) cladding position, said anchor means comprising a plurality of anchor elements (17), characterized in that at least some of said cladding elements (12) comprise at least one housing (21) for a corresponding anchor element (17), said anchor elements (17) being movable between - a first mounting position in which they may fit into said housing (21) during movement of the cladding element (12) in a mounting direction (26) towards the wall (14) to be clad and - a second holding position in which, when the anchor element (17) is within said housing (21), the cladding element (12) cannot be removed from the anchor element (17) along a removal direction opposite to said mounting direction (26).
