Abstract (en)  
A refrigerator including a first inner case (20) defining a freezing compartment (21) and a second inner case (30) defining a refrigerating compartment (31). The first inner case (20) and the second inner case (30) are formed with rupture portions (27,37) upon injection molding of the first and second inner cases. The rupture portions (27,37) may be cut away to communicate the first inner case (20) and the second inner case (30) with each other, enabling use of the inner cases having a common configuration.
