Abstract (en)

[origin: EP2309349A1] The case (2) has a middle (3) for housing a clock movement, and a back (4) pivotably mounted on the middle. A bow (9) enables fixation of a chain for using a timepiece (1) as a pocket watch. The back is mechanically connected to the middle for pivoting between open and closed positions. The back defines a support surface in the open position for using the timepiece as a table clock. An attachment member includes a recess provided in the middle and near the back, such that an end (6) of the watchstrap is inserted in the recess when the back is in the open position.
