Abstract (en)

[origin: WO2009138196A1] The invention relates to a centrifuge, particularly a continuously operating separator, comprising a drum (1) having a vertical rotation axis (D), which preferably has a single or double conical inner jacket, and an inlet pipe (2) opening into a distributor (3) having at least two or more distributor channels (6) distributed about the circumference, and further comprising a disk package (7) made of separator disks (8), characterized in that at least two or more pipe-like elements (14) are distributed at the outer circumference of the disk package (7), and that the pipe-like elements (14) are fastened externally on the separator disk package (7).
