Abstract (en)

[origin: WO2010018050A1] The invention relates to a printing unit (01) of a printing machine, wherein the printing unit (01) comprises at least two frame parts (02; 03), the distance between which can be modified and in which several form cylinders (21) and several transfer cylinders (20) for printing a web (100) are arranged in each case, wherein the frame parts (02; 03) have a smaller distance therebetween when the printing unit (01) is closed than when the printing unit (01) is open, wherein the printing unit (01) comprises at least two web guiding elements (30; 04; 05), wherein a tangent (11) is established by the transfer cylinders (20) of the stationary frame part (02), and wherein another tangent (12) is established by the at least two web guiding elements (30; 04; 05). The tangent (11) of the transfer cylinders (20) and the tangent (12) of the web guiding elements (30; 04; 05) are arranged at a distance (a).
