Abstract (en)

[origin: CA2730460A1] Aircraft (1) comprising a fuselage (3) and two aerodynamic wings with at least two respective propeller drives (11, 12, 13, 14) disposed thereon at a distance from one another in the span width direction of the wings, each of said propeller drives comprising a propeller rotating axle (11a, 12a, 13a, 14a), wherein the aircraft (1) comprises a control device for controlling the propeller drives (11, 12, 13, 14), wherein in an operating mode of the control device for producing propulsion, the propeller drives (11, 12, 13, 14) are actuated in such a way that the outer section of a respective propeller attached to the respective propeller rotating axle is moved downward from above on the side facing the fuselage (3).
