Abstract (en)
[origin: WO2010003683A1] The present invention relates to a supporting framework system comprising a first supporting framework and a second supporting framework, wherein the second supporting framework is at least partially held in the first supporting framework in at least one position of the supporting framework system, both supporting frameworks can move, or shift telescopically, relative to one another and wherein the first and/or the second supporting framework is/are formed from a lattice support framework that can be folded in and unfolded out.
