Abstract (en)  
[origin: WO2010015894A1] The female terminal comprises a terminal bottom wall (120) and a first contact blade (108A) extending above the terminal bottom wall (120). The first contact blade has a plane lever arm (112A) perpendicular to the terminal bottom wall (120). A male terminal is intended to be clamped between the contact blade (108A) and the terminal bottom wall (120). The female terminal further comprises rigidifying means (132A, 132B) for rigidifying, along a rigidification direction perpendicular to the terminal bottom wall (120) and going away from the contact blade (108A), at least a portion of the bottom wall (120) extending frontward from the rear end (122).
