Abstract (en)  
[origin: WO2010012346A1] Data cable 1 having an electrical line with a plurality of line cores (11) and an electrical shield (12) as well as a connector (2) which is arranged at one end of the data cable 1 and contains a sleeve 4 which is electrically connected to the shield (12) and is made of a deep-drawn tube 40, to which a bead 42 is fitted by means of compression, form-fitting elements 71 being cut or punched into said bead and forming a first form-fitting connection with mating form-fitting elements of a moulded body 5 which surrounds the sleeve 4. The outer contour of the moulded body 5 and the inner contour of a central opening in a housing which surrounds the moulded body 5 form a second form-fitting connection, as a result of which axial fixing and rotationally fixed assignment of the housing of the connector 2 to the line cores (11) of the data cable 1 are achieved in a simple manner.
