Abstract (en)

[origin: WO2010003451A1] A method is described for engaging a first transcoder entity (18) in a tandem free operation session with a second transcoder entity (22). The transcoder entities control the tandem free operation session and the insertion of transcoders into the session. They also perform a synchronization procedure of the first transcoder entity (18) and the second transcoder entity (22) and send tandem free operation frames (332). The tandem free operation frames (332) are sent from the first transcoder entity (18) to the second transcoder entity (22) during execution of the synchronization procedure. A transcoder entity and a program embodying the invention is also described.
