Abstract (en)
[origin: EP2311358A1] The plate has a base plate (402) made of plastic material and including a through opening (403). The base plate firmly connects a connecting element (407) made of another plastic material with bag wall using ultrasonic welding. The connecting element is arranged on the bag wall to a side of the base plate to be connected, where the plastic materials are selected from thermoplastic. The former plastic material is different from the latter plastic material, and the connecting element is partially or fully arranged in a recess. Independent claims are also included for the following: (1) a method for connecting a holding plate with bag wall (2) a method for manufacturing a holding plate.
