Abstract (en)
[origin: EP2311708A1] The block (10) has a lower part adapted to be fixed on a front part of a horizontal base (4) of a seat (2) and equipped with a connection unit i.e. connection mouthpiece, connected to an inflation/deflation unit i.e. pump (22). A cylindrical peripheral wall is deformable such that the peripheral wall takes a deployed state in which the wall is deployed towards the top or a shortened state in which the wall is shortened under the effect of the inflation/deflation unit. A lower return spring acts in its shortening direction. An independent claim is also included for a chair lift comprising a safety block.
