Abstract (en)
A collapsible container (10) includes a plurality of walls (18,14) collapsible onto the base (12). At least one wall (18) has a support (20) pivotably mounted below a lip (25) formed on an upper edge of the wall (18). The support (20) is pivotable between a deployed position where it is partially supported on an adjacent wall (14) and a retracted position. A shoulder (72) deploys the support (20) as the wall (18) is moved toward the upright position. A torsion member (58) may also bias the support (20) toward the deployed position.
