Abstract (en)
By the invention a manhole closure is provided comprising a cover (50) and a corresponding frame (100) for receiving the cover (50, wherein a gasket (10) is placed between the cover (50) and the frame (100) along at least a part of the contact area between the cover (50) and the frame (100), whereby the gasket (10) exceeds the dimensions of a space between the cover (50) and the frame (100) Moreover, the invention provides a method for closing a manhole comprising specific steps of providing a manhole closure, forcing the cover (50), having attached thereto the gasket (10), into the frame (100), whereby an enlarged lip (18) is initially deformed and regains a non-deformed state upon reaching a position at an enlargement (110) of the space between the cover (50) and the frame (100)
