Abstract (en)

[origin: EP2312101A2] The fitting has a locking plate (13) arranged at an extension arm (7) in a closed position. A slider (24) is arranged in the locking plate and moved parallel to a moving direction of a locking pin (17) in a position of a leaf of a window. The slider has a locking edge (25) that releases or blocks an opening (23) in the locking plate in response to a switching sequence of a drive arrangement. The slider has two control edges (27, 28) that are projected into a movement area of the pin and arranged orthogonal to the locking edge, where the pin is arranged on a connecting rod.
