Abstract (en)

The application concerns an anti-mosquito roller screen which is horizontally slidable. The arrangement has a movable vertical stile which is connected to an upper horizontal rail and comprises the handle. Inside the stile a flexible chain is housed which is inserted or retracted when closing or opening the screen and which serves as the lower frame part of the screen. In particular the application describes the arrangement and pre-tensioning of the cable which is invisibly housed in the frame parts and connects the chain to the screen roller.
