Abstract (en)  
[origin: DE102008031221B3] The system (5) has heat exchanger elements arranged in a set of rows (8) on a support structure. Cooling air sucked by ventilators flows through the heat exchanger elements. A wind guiding wall is arranged below the heat exchanger elements. The wind guiding wall exhibits same horizontal orientation as a longitudinal side (7). Distance between the wind guiding wall and the longitudinal sides in a middle longitudinal section of the wind guiding wall is larger than distance in an end-sided longitudinal section attached to the middle longitudinal section.
