Abstract (en)
[origin: EP2314393A1] The press (1) has two bending tools (21, 22) movable against each other from a resting position to a pressing position. A tool holder (8) receives and attaches one of the bending tools to a pressing bar (4). Another tool holder (9) receives and attaches the other bending tool to another pressing bar (7). A portion (16) of a tool-transport rail (13) extends along the tool holder and is connected with the former pressing bar in a non-displaceable manner. Another portion (17) of the rail forms a closed ring path (15) between opposite ends (18, 19) of the former portion of the rail.
