Abstract (en)

[origin: EP2314449A1] The material plate has an inorganic carrier plate (10) which consists of a surface layer (1) and a countermove layer (11). The surface layer comprises natural or synthetic fibers, a binding agent (3), abrasion-proof particles (4) and an additive (5). The inorganic carrier plate is a cement fiber board, cement chipboard or a gypsum fiberboard. The binding agent is selected from the group consisting of melamine resins, acrylic resins and polyurethane resins. An independent claim is also included for a method for manufacturing a material plate.
