Abstract (en)
[origin: EP2314522A1] The container has a neck part (2) including a longitudinal axis and an outlet end (28). The outlet end comprises outlet channels (11, 12) with outlet openings (10, 14), where the outlet openings are formed along the longitudinal axis. A shock absorbing element (20) includes two ends, where one of the ends is connected to the neck part and the other end is in spaced circumferential relation to the neck part. A jacket (23) extends between the ends. The neck part is fully incorporated in an intermediate space. The neck part is formed as a tube section.
