Abstract (en)

[origin: EP2030914A1] The method involves combining a container (1) and covers (2,12) in different forms with each other during the manufacturing of a capsule, so that the container closed with the cover receives the full volume. The capsule has a filter, inlet closures (6,16) and an outlet closure, which are arranged in such a manner that the liquid in the container is supplied over the inlet closure. An independent claim is included for a modular system for manufacturing a capsule for a device for generating liquid food, particularly for coffee machine.
