## Abstract (en)

The unit has a compression channel for fully drawn bundle of fibers. A wear-resistant part is non-movably connected to a holder (25). Another wear-resistant part is connected with the holder by an adhesive. A press connection is provided between the holder and a third wear-resistant part (141). A receiver (26) is formed by a pivot that projects from the holder. The compression channel comprises a locating surface (51) for positioning of the channel in a circumferential direction of a stretching unit roller (3). Independent claims are also included for the following: (1) a print roll aggregate comprising a base body (2) a method for producing a compression unit for a drawing frame of a textile machine.

## Abstract (de)

Die Erfindung betrifft ein Druckwalzenaggregat für ein Streckwerk einer Textilmaschine mit einer Verdichtereinheit, einem Grundkörper und zwei sich nicht berührenden Druckwalzenzwillingen, die in dem Grundkörper aufgenommen sind, wobei das Druckwalzenaggregat (18) wenigstens ein Mittel (21) zum Befestigen der Verdichtereinheit (20) am Druckwalzenaggregat (18) aufweist und die Verdichtereinheit (20) beweglich am Druckwalzenaggregat (18) angebracht ist.
