Abstract (en)

[origin: EP2314779A1] The invention relates to a laminated insulating panel, use of such an insulating panel and methods for placing such an insulating panel. The invention relates more particularly to laminated insulating panels comprising a base layer of an insulating material and a cover layer of a mechanically stronger material. Owing to judiciously positioned recesses, which in placed position create a space between the attaching side of the insulating panel and the structure for covering, the insulating panel is suitable for vertical applications. The invention also relates to the use, and methods for use, of such an insulating panel for placing against a wall and as formwork for cast structures.
