Abstract (en)

Dynamic system for supporting and anchoring movable partitions for compartmenting interiors, comprising panels, supporting uprights of said panels and coupling means of said uprights with the anchorage surfaces of the whole structure, and characterized in that said coupling means of the uprights to the anchorage surfaces are elastic hinge constraints which allow to modify the inclination of said coupling means with respect to the anchorage surfaces and to modify the adherence or parallelism conditions between the panel and the upright supporting the same, to absorb compression and traction stresses thus shortening or elongating both with static and impulsive stresses.
