Abstract (en)
[origin: EP2314788A1] The section has a head with a part that is perpendicular to a wall, where the section is made of band of elastic material such as metal. Another wall has a fixation unit (6) i.e. slot, for fixing the section to another section. The latter wall is parallel to the former wall, where height of the latter wall is greater than that of the former wall. Another fixation unit (7) i.e. screw, fixes the former wall to the latter wall. The former fixation unit is fixed on lower edge of the latter wall. An independent claim is also included for a method for manufacturing a gypsum board.
