Abstract (en)
[origin: EP2314819A2] The connector has a resting device for connecting a bar (4) with a base plate (2) of a roller blind box (1), where the bar is immersed in a recess in a window frame (3). A screw connector is provided for screwing the bar in the recess with a side wall of the window frame such that the roller blind box is fixed at the window frame. Sealing strips run between the bar and the side wall adjacent to the screw connector. A rubber element is arranged between an L-shaped cover strip (10) and an outer side of the side wall, where the cover strip is made of elastic or flexible plastic.
