Abstract (en)

[origin: EP2314824A1] The motor has a tubular motor housing (1) fixed over a torque support (5), and an output side coupled with a winding shaft (4) by an actuator (6). The actuator is axially mounted on the output side with respect to an output side axis and relatively towards the output side in different angular positions on the output side. The actuator mounted in a freewheel angular position is coupled with the output side by a freewheel with a freewheel angle in a torque proof manner, where the freewheel position is displaced with respect to a base angular position.
