Abstract (en)
[origin: EP2314962A2] The appliance has a door-closing system (100) comprising springs (170) for moving a door (10) into its closed position. A tractive slide (130) stands in connection with the system such that the springs are moved into a pre-stressed condition by the slide during opening of the door. A locking element (120) is connected with a damper (110) and the springs such that the springs are fixable in its pre-stressed condition by the locking element. The slide and locking element are coupled with each other and decoupled from each other by two moving sections of the door, respectively.
