Abstract (en)

[origin: EP2315166A2] The block (1) has a receiving zone (7a) arranged for receiving clients and articles, and a control zone (8a) provided with a control unit. A path (5a) guides clients from an input of the block towards an output of the block. Sorting zones (3a, 3b) are provided with the input of the block, where the needling units are arranged for authorizing selective passage of the clients towards the path and alternative path (6), where the alternative path is disassociated from the path. An independent claim is also included for a collecting method for grand surface.
