Abstract (en)
[origin: EP2315224A2] A plated component (12) has an exposed portion (30) exposed from a case (1) and a back portion (31) extending from the exposed portion (30) toward a substrate (4). The substrate (4) has a ground connecting portion (41) on a surface thereof facing the plated component (12). The back portion (31) of the plated component (12) has an extending portion (33) extending toward the ground connecting portion (41) of the substrate (4). The extending portion (33) has a stepped portion (33a) in a part thereof located at a predetermined position in the longitudinal direction and projecting from the case (1). An electrically conductive spring body (34) is held between the stepped portion (33a) and the ground connecting portion (41).
