Abstract (en)  
[origin: US2010054636A1] The presently disclosed subject matter is a novel adaptation of a pouch that enables the measurement and dispensing of unit doses of flowable products. Particularly, the disclosed pouch utilizes the addition of a separate section of film that separates the pouch into a main reservoir and a dispensing reservoir. The use of the dividing film allows the structural integrity of the pouch to remain intact. The dividing film also comprises an opening that allows communication between the two reservoirs to achieve dispensing of the flowable product.
