Abstract (en)
[origin: WO2009155639A1] A supporting structure for geological sample drilling equipment having a minimal environmental footprint is disclosed. The structure consists a platform on which drilling equipment can be positioned, and a plurality of legs extending from the platform to the ground. The legs are of variable length, which allows the platform to be set horizontally even on uneven ground. The platform includes a rotatable portion so that the drilling equipment can be easily rotated to a desired orientation.
