Abstract (en)

[origin: WO2009156639A1] The device of the invention includes a hollow rigid member (40) and a curvature limiter (42) movable relative to the hollow rigid member (40). The device includes a releasable means (46) for the axial immobilization of the curvature limiter (42) on the flexible line (18) in at least one first direction along a travel axis (X-X'). The axial immobilization means (46) includes a locking member (90) axially secured to the flexible line (18), and a member (92) for fitting the locking member (90), axially secured to the curvature limiter (42). Said members (90, 92) are movable relative to each other around the travel axis (X-X') between a configuration for axial immobilization of the flexible line (18) on the curvature limiter (42), and a configuration for axial travel of the flexible line (18) across the curvature limiter (42).
