Abstract (en)

[origin: WO2010020238A1] The invention relates to a plastic part, especially a bearing part, specifically a cage for receiving rolling bodies of a bearing, the body (1) of the plastic part consisting essentially of a radiation-crosslinkable plastic material. The aim of the invention is to provide a simple way of identifying the irradiation state of the radiation-crosslinkable plastic material during the production of the plastic parts, specifically of the cage for the rolling bearing. To this end, pigments (3, 4) that undergo a visible change during the irradiation are mixed in with the plastic material. The invention also relates to a method for producing a plastic part, especially a bearing part, specifically a cage for receiving rolling bodies of a bearing, the plastic part comprising a body (1) consisting of a radiation-crosslinkable plastic material.
