Abstract (en)

[origin: WO2010054622A2] The invention relates to an optoelectronic component (1) comprising a connection support (2), on which at least two radiation-emitting semiconductor chips (3) are located and a conversion element (4) that is fixed to the connection support (2), said conversion element (4) spanning the semiconductor chips (3) in such a way that the chips (3) are surrounded by the conversion element (4) and the connection support (2). At least two of the radiation-emitting semiconductor chips (3) differ from one another with respect to the wavelengths of the electromagnetic radiation that they emit during operation.
