Abstract (en)

The present invention provides an electronic device-accommodating bag (1) in which a shock is hardly transmitted to an accommodated electronic device (personal computer). The electronic device-accommodating bag includes a pair of side face portions (2), a back face portion (3) that connects end portions of the side face portions (2) in an openable and closable manner, a fastener portion (4) that is attached to peripheries of the side face portions (2) at a location excluding the back face portion (3), and a shock-absorbing portion (5) that is disposed along an entire outer peripheral edge portion (23) of the side face portions (2). The shock-absorbing portion (5) is made of a synthetic resin, and is formed so as to be hollow along the entire outer peripheral edge portion (23) of the side face portions (2). A rib (53) extending in a direction parallel to the side face portions (2) is formed in an internal space of the shock-absorbing portion (5) so as to connect opposing inner faces of the shock-absorbing portion (5).
