Abstract (en)  
[origin: CA2717214A1] The data sheet comprises a plate (2) which is or can be personalized on at least one side. The plate (2) can be bound into the ID with a strip-shaped flexible connecting element (3). By means of a connection (5), the connecting element (3) is firmly connected to one edge (4) of the plate (2). The strip-shaped connecting element (3) has at least one weakened material portion (6) which makes it more difficult to detach the plate (2) from the connecting element (3) without damage. The weakened material portion (6) is, for example, an incision or a score in the connecting element (3). The invention increases the security against forgery of IDs which have such a data sheet (1).
