Abstract (en)

The present invention relates to a power-cut (power outage) compensating method for a washing machine. A characterising feature of the present invention is that it comprises the stages of: carrying out the selected routine; deciding whether the power supply has been interrupted while carrying out the selected routine; if the power supply has been interrupted, storing in a memory unit information about the routine currently being carried out; deciding whether the power supply has restarted; and, if the power supply has restarted, restarting the routine stored in the memory unit.
