Abstract (en)
[origin: EP2317048A1] The present invention relates to an adjustable hinge assembly comprising a first hinge member 6, a second hinge member 4, an intermediary element 5, and a hinge pin 1 substantially oriented in a first direction X and rotatably connecting said intermediary element 5 to said first hinge member 6. Said second hinge member 4 and said intermediary element 5 are joined by a coupling adjustable in a second direction Y substantially perpendicular to said first direction X. When the adjustable hinge assembly is in a closed position, said first hinge member 6 prevents access to said coupling. The present invention also relates to methods for assembling and disassembling such an adjustable hinge assembly.
