Abstract (en)
The present invention relates to an overhead sliding door assembly, comprising a sliding overhead door having, in a mounted and a closed position, two vertical sides, and a left and a right guide track system arranged to guide said sliding overhead door between a closed position and an open overhead position at least when said assembly is in a mounted position. The guide track systems each comprises a telescopic and foldable second track member which, when arranged simultaneously in a collapsed and folded position, does not protrude substantially beyond a geometrical door end plane along the direction of extension of said second track members.
