Abstract (en)

[origin: EP2317261A2] The refrigerator has a carrier (6) movably supported on telescopic rails (9) in a cooling space and including plates (7) e.g. glass plates, laterally enclosed by two frame profiles (8) e.g. aluminum extrusion profiles. A recess (14) is formed in the profiles and extensively receives one of the telescopic rails in a moved position. The profiles are connected to the recess. Guard rails (16, 17) are extended to front and/or rear edge of the plates. The profiles have an extruded longitudinal channel (15) that is attached to ends of the guard rails. Plastic strips are attached to the profiles.
