Abstract (en)

The invention relates to a method of operating a communications terminal (10a), particularly a mobile terminal of a cellular communications system, wherein said communications terminal (10a) exchanges (300) data with a further communications device (20a), particularly a base station of a cellular communications system, over a first wireless communications link (100a), wherein said communications terminal (10a) determines (310) channel state information related to said first wireless communications link (100a), and wherein said communications terminal (10a) forwards said channel state information to said further communications device (20a) and/or another remote device (31) over a second wireless communications link (200a), which is different from said first wireless communications link (100a).
